Loading [MathJax]/extensions/Safe.js
```

```
lras=accuracy_score(y_test,pred_lr)
print('accuracy_score =',lras*100)
```

```
accuracy_score = 87.5
```

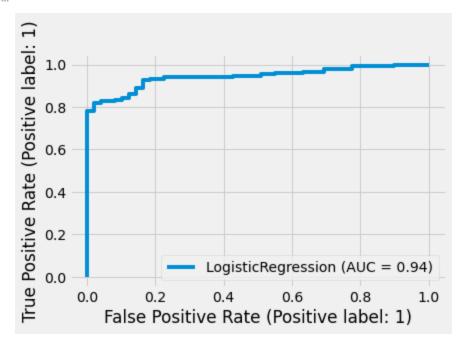

There is no much difference in the accuracy score value after perforfing the hyperparameter tuning by gridsearchCV

Accuracy score is 87.5

```
from sklearn import metrics
metrics.plot_roc_curve(lr, x_test, y_test)
metrics.roc_auc_score(y_test, pred_lr, average=None)
```

Out[126...

0.8069333693742398

By the above graph we can say that area under the curve is 94% which is very good value

CONCLUSION

- 1) area under the curve is 94percent which is very good value
- 2) The LogisticRegression giving the best accuracy value
- 3) accuracy_score, F1_score, Classification_report, Confussion_matrix and AUC value is shown in the above table
- 4) LogisticRegression is giving the best accuracy score so we need to save the LogisticRegression predicted values by using pickel
